Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Objections

The numbering of claims is not in accordance with 37 CFR 1.126 which requires the original numbering of the claims to be preserved throughout the prosecution. When claims are canceled, the remaining claims must not be renumbered. When new claims are presented, they must be numbered consecutively beginning with the number next following the highest numbered claims previously presented (whether entered or not).

Misnumbered claims 68-79 been renumbered 76-87.

Claim Rejections - 35 USC § 102

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 54,59,64 and 76-87 are rejected under 35 U.S.C. 102(b) as being anticipated by Burke et al.

Burke et al. teaches a polishing pad comprising a first set of grooves, 26, disposed in a first area, the first set of grooves having a first depth, a first width, and a first density, a second set of grooves, 20, disposed in a second area, the second set of grooves having a second depth, width and density, wherein the first depth, width and density is smaller than the second depth, width and density, (col. 4, line 61- col. 5, line 7), in order to reduce the polishing rate, (col. 1, lines 56-62). Burke et al. also teaches that the first area corresponds to a center of a wafer to be polished and is disposed in a center of the polishing pad, and the first area corresponds to the edge of the wafer, and

is disposed at the edge of the polishing pad, (fig. 1, the grooves, 26 extend from the edge of the pad to the center of the pad).

Response to Arguments

Applicant's arguments filed 11/20/03 have been fully considered but they are not persuasive.

The polishing pad has a first set and second set of grooves. The first set is in the circumferential direction and go from the edge to the center of the pad. The second set are in the radial direction, the claims don't specify the orientation of the grooves, and the claims specifies that the first area corresponds to the center of the pad and the edge of the pad, and the first set of grooves run from the center to the edge of the pad, therefore the Burke et al. reference reads on the claims.
